## What Happens if the AI Loop Breaks? Answer Key

### Scenario A: Voice Assistant

- (Missing Step) **Input**
- **What happens without it?**  
→ The AI doesn't know what the user wants. Without input, it can only guess, so it won't improve at giving the right song.

### Scenario B: Weather AI

- (Missing Step) **Feedback**
- **What happens without it?**  
→ The AI won't know if its prediction was right or wrong. It will keep repeating the same errors without learning from them.
