The Myth Machine: How AI Creates Believable Fictions Suggested Answers

1. When an AI hallucinates, it makes up information that seems true but is actually not real or based on facts.
2. AI makes up information when it doesn't have enough correct data, so it guesses to sound helpful or complete.
3. The author gives the example of AI inventing a name for the person who "discovered" Atlantis, even though Atlantis is only a myth.
4. The author means that instead of trusting everything that sounds believable, we should use our thinking skills to figure out what's real and what's not.
5. Someone could check other reliable sources, such as books, trusted websites, or experts, to see if the AI's answer matches real evidence.
