Name _____

# AI Vocabulary in Headlines Answer Key

**1. Algorithm** - A step-by-step set of instructions for solving a problem; in this case, computer instructions for smarter shopping recommendations.

**2. Bias** - Unfair preference or prejudice; in AI, when the system treats some groups unfairly because of how it was trained.

**3. Accuracy** - How close the AI's answers are to being correct; here, it means the chatbot is often right about medical information.

**4. Creativity** - The ability to produce new and original ideas; in this context, whether AI encourages or limits student imagination.

**5. Regulations** - Official rules or laws; here, rules the government might set about how AI can be used.

**6. Ethics** - Principles about what is right and wrong; here, concerns about whether using personal data to train AI is fair or respectful.

**7. Performance** - How well something works; here, how well the AI plays video games compared to humans.
