## Teacher's Guide

- Review key words such as "in all" and "altogether" to help students identify addition problems.
- Encourage students to underline the fractions before solving.
- Remind students that the denominator stays the same when adding like fractions.
- Provide fraction strips or circles for students who benefit from visual models.
- Have students explain how they found each sum to a partner before checking answers.
- Extend the lesson by asking students to write their own one-step fraction word problem using like denominators and exchange it with a classmate.
