5. \$73.74.
6. \$1,306.99.
7. \$1,183.01.
8. Yes. \$33.01 would remain.

Teacher's Guide

- Quick implementation: Have students scan the statement first, then use addition and subtraction to answer the eight questions.
- Differentiation: Encourage students to label deposits as money in and expenses as money out before calculating.
- Engagement: Ask students to predict which spending category used the most money before completing the calculations.
- Extension: Have students determine how much money would remain if the laptop cost \$1,200 instead, and explain whether the purchase could be made with the available funds.
