## Electric Main Ideas

**Directions:** Read the passage carefully.

1. Identify the most important ideas. Ask yourself: *If I had to explain this to a friend in three sentences or less, what would I say?*
2. Write a short summary of **2-3 sentences** that captures only the central ideas, leaving out small details and examples.
3. Check your summary to make sure it makes sense without the passage.

### The Rise of Electric Cars

In recent years, electric cars have become increasingly popular around the world. Unlike traditional vehicles that rely on gasoline, electric cars run on rechargeable batteries. This change is helping to reduce air pollution and cut down on greenhouse gas emissions. Many governments encourage drivers to buy electric cars by offering tax breaks and building charging stations in cities. Car companies are also competing to design models that can travel longer distances without needing a recharge. However, challenges remain, such as the high cost of batteries and the limited number of charging stations in rural areas. Despite these obstacles, experts predict that electric cars will play a major role in creating a cleaner, more sustainable future for transportation.

**Question:** Write a short summary (2-3 sentences) that explains the main ideas of the passage without including extra details.
