## Exploring What ChatGPT Can Do

ChatGPT is a powerful computer program that can do many different things with words. It was created by a company called **OpenAI**, and it works by reading what you type and replying in complete sentences. You can ask it questions, give it ideas, or ask for help with projects.

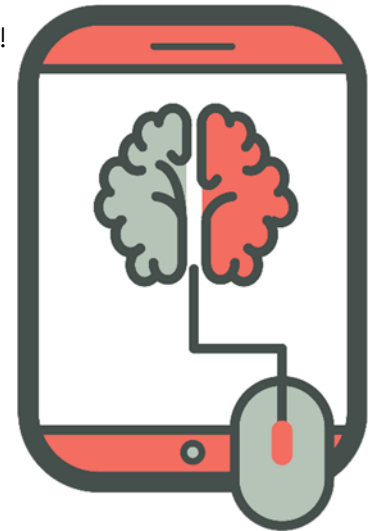

One of ChatGPT's best features is that it can **answer questions** on almost any topic. You can ask about science, history, or art, and it will do its best to explain. It can also **summarize** long passages, making them easier to understand.

Another helpful feature is that ChatGPT can **help with writing**. Students use it to plan essays, write stories, and find better words for sentences. It can even help fix grammar and spelling mistakes. Teachers and adults use ChatGPT to create quizzes, lesson plans, or letters.

ChatGPT is also great for **creative work**. You can ask it to make up poems, jokes, or short stories. It can write songs, design riddles, or invent characters for a play. Some people use it to **practice languages** by chatting in English, Spanish, or many others.

Even though ChatGPT is very smart, it has limits. It doesn't go online to look up new information, and it doesn't know things that happened after it was last updated. It also doesn't have personal feelings or opinions. That's why users should always **check the facts** and think carefully about the answers they get.

ChatGPT is like a creative helper, ready to read, write, and imagine with you!

### 1. What company created ChatGPT?

- A. Apple      B. OpenAI      C. Google      D. Microsoft

### 2. What is one-way ChatGPT helps students with writing?

- A. It can paint pictures for their stories.  
B. It can tell them what grades they will get.  
C. It can read their essays out loud.  
D. It can fix grammar mistakes and give better word choices.

### 3. What does the passage say about ChatGPT's limits?

- A. It can only write poems.      B. It sometimes forgets to answer questions.
