Meet Claude AI

Claude AI is a type of computer program called an **artificial intelligence**, or **AI** for short. That means it can understand words and respond in a way that sounds like a person. People use Claude to **learn new things**, **write stories**, **solve problems**, and **ask questions** about almost any topic.

Claude was created to be **helpful, polite, and safe**. It doesn't know everything, but it can explain ideas, help with schoolwork, and even come up with creative stories or jokes.

When you chat with Claude, you type your question or task in a message box, and Claude sends back an answer in a few seconds. You can then **ask follow-up questions** if you want to learn more.

Claude is not a person - it's a smart tool made by people. It doesn't have feelings or opinions, but it can talk about human emotions and help people understand them better.

The most important thing when using Claude is to **be safe and respectful**. Never share private information like your full name, address, or passwords. Claude can help you learn, but **you are the one in control of what you say and do**!

1. What is Claude AI?
A. A type of artificial intelligence that can chat with people
B. A video game character
C. A person who answers questions online
D. A robot that lives in space

2. What are some things Claude can help people do?
