

Myths and Realities of Claude AI Answer Key

1. What is Claude AI?

Answer: B. A computer program designed to understand and generate language

Claude is a type of artificial intelligence built to read and write text in natural language-like chatting, explaining, and helping users learn.

2. Who created Claude AI?

Answer: A. A company called Anthropic

Claude was developed by Anthropic, a U.S.-based research company focused on creating helpful, honest, and safe AI systems.

3. What can Claude AI actually do?

Answer: C. Chat, answer questions, help write, and explain information

Claude can assist with creative writing, summaries, explanations, brainstorming, and more-but it can't do physical tasks like cooking or cleaning.

4. Does Claude AI have feelings?

Answer: D. No-it can describe emotions but doesn't experience them

Claude can talk about emotions and empathy but doesn't "feel" anything; it's simulating understanding, not living it.

5. Can Claude AI remember everything you say to it forever?

Answer: B. No, each session is separate unless a special memory feature is used

Claude doesn't automatically store personal information between chats. Some versions may use limited memory features, but these are carefully controlled and private.

6. How does Claude AI come up with answers?

Answer: D. It uses patterns learned from lots of text to generate likely responses

Claude was trained on large amounts of written text and uses language patterns to predict what comes next in a sentence-it doesn't search the internet while chatting.
