3. Correct.
4. Incorrect. Correct commission: \$196.00.
5. Correct.
6. Correct.
7. Incorrect. Correct commission: \$240.00.
8. Correct.

Teacher's Guide

- Quick implementation: Have students check the percent-to-decimal conversion first, then verify the multiplication.
- Differentiation: Encourage students needing support to write each percentage as a decimal before checking the calculation. For advanced students, cover the shown work and have them calculate independently first.
- Engagement: Present students as commission auditors responsible for catching payroll mistakes before payments are issued.
- Extension: Have students explain what caused each incorrect answer, then create one believable commission error for a partner to identify and correct.
