

Name _____

Workplace Commissions Answer Key

1. \$216.00
2. \$382.50
3. \$310.00
4. \$900.00
5. \$384.00
6. \$611.00

Teacher's Guide

- Quick implementation: Have students underline the sales amount and circle the commission rate in each problem before calculating.
- Differentiation: Provide percent-to-decimal conversions for students needing support. Challenge advanced students to solve without a calculator and estimate first.
- Engagement: Assign students a workplace role from the worksheet and have them compare their fictional commission earnings after solving.
- Extension: Ask students to choose one scenario and calculate the new commission if sales increase by 20% while the commission rate stays the same.
