## Exit Slip: Clean Power Match

**Directions:** Before leaving class, read the two short passages below carefully. Then, answer the questions that follow in complete sentences.

### Solar Power

Solar power comes from the energy of the sun. Panels collect sunlight and turn it into electricity for homes and businesses. It is renewable, clean, and reduces pollution.

### Wind Power

Wind power comes from moving air that turns giant turbines. These turbines generate electricity for homes and cities. Like solar, wind power is renewable and does not create pollution.

### Exit Ticket Task

1. Write **one similarity** between solar power and wind power.

2. Write **one difference** between solar power and wind power.
