

Name _____

Exit Slip: Clean Power Match Answer Key

Sample Responses

1. **Similarity:** Both solar power and wind power are renewable energy sources that do not create pollution.
2. **Difference:** Solar power comes from sunlight, while wind power comes from moving air turning turbines.

Teacher Notes/Guide

- This **exit ticket** checks for quick comprehension at the end of a lesson.
- Encourage students to use **signal words** like *both, also, unlike, however*.
- Responses should be brief but **accurate**, showing students can identify at least one similarity and one difference.
- Extension: Have students share their exit tickets aloud to review similarities and differences as a group before class ends.
