## Source Strength Test Answer Key

- **Author Expertise:** Weak - The author is a literature student with no background in science, engineering, or renewable energy.
- **Date:** Weak - Published in 2015 and makes predictions about 2020 that are now outdated.
- **Publisher:** Weak - A personal blog (*TechDreamer*) with no institutional or editorial oversight reduces reliability.
- **Evidence:** Weak - No data, research studies, or expert citations are provided; only photos are included.
- **Final Judgment:** Not credible - The source lacks expertise, current information, a reliable publisher, and supporting evidence.

### Teacher Notes:

- Encourage students to see how **all four categories matter** when judging credibility.
- Discuss how flashy visuals or confident predictions do not replace evidence.
- Point out that the outdated date combined with failed predictions strongly undermines the article's credibility.
