Name _____

Question Slips

Directions: Read the passage carefully. On each slip, **jot down one question of your own**:

- A **Literal question** (fact-based, directly answered in the text).
- An **Inferential question** (requires reasoning or drawing conclusions from clues).
- An **Evaluative question** (requires judgment, opinion, or connecting to bigger ideas).

After writing, provide a model answer for each of your questions.

Carlos loved astronomy and spent most nights gazing at the stars through his small telescope. He often sketched what he saw in a notebook, labeling constellations like Orion and Cassiopeia. One evening, he noticed a bright streak racing across the sky. Excited, he ran inside to tell his sister that he had just seen a meteor.

Later, Carlos read in a science magazine that meteors were pieces of rock burning up as they entered Earth's atmosphere. He was amazed to think he had witnessed something that traveled millions of miles through space before vanishing in seconds. Inspired, Carlos decided that one day he wanted to study space and become an astronomer.

1. Write **one Literal question** about the passage and its answer.

2. Write **one Inferential question** about the passage and its answer.

3. Write **one Evaluative question** about the passage and its answer.
