

Name _____

Match the Term to the Definition

Instructions: Draw a line to match each division term to its correct definition.

Terms

1. Dividend
2. Divisor
3. Quotient
4. Remainder
5. Division
6. Equal Groups
7. Partition
8. Divide
9. Fact Family
10. Long Division
11. Repeated Subtraction
12. Equation

Definitions

- A. The number that is divided into equal parts.
- B. The number that tells how many groups or into how many parts the dividend is divided.
- C. The answer to a division problem (without the remainder).
- D. The amount left over after dividing when the dividend is not evenly divisible by the divisor.
- E. The operation of splitting a number into equal parts or groups.
- F. Groups that all have the same number of items.
- G. To separate or share a number into equal groups.
- H. A set of related multiplication and division facts using the same three numbers.
- I. A method of division where you divide step by step, often used for larger numbers.
- J. A way to think of division by subtracting the divisor repeatedly from the dividend.
- K. A mathematical sentence that shows two expressions are equal, often including an operation sign.
- L. To share or split something into smaller, equal sections.
