

Name _____

3. $700 + 300 = 1,000$ people
4. $3,000 + 3,000 = 6,000$ people
5. $400 + 300 + 200 = 900$ people
6. $4,000 + 3,000 + 1,000 = 8,000$ fans

Teacher's Guide

- Quick implementation: Have students round each group first, then add the rounded numbers. Emphasize that crowd estimates give a quick approximate total.
- Differentiation: Let students who need support write each rounded number above the original. Challenge advanced students to estimate mentally.
- Engagement: Present each problem as a quick crowd-count assignment for an event organizer who needs an approximate attendance total.
- Extension: Have students calculate the exact attendance for each event and compare it with the estimate.
