Name _____

How AI Helps People at Work

Artificial Intelligence, or AI, is not only in our phones and games — it also helps people do their jobs. In hospitals, AI can look at X-ray pictures and help doctors find problems more quickly. This does not replace doctors, but it helps them make better decisions.

In stores, AI is used to suggest what products might sell best. For example, if many people are buying pencils, AI might tell the store to stock more erasers. This helps workers keep the shelves full and customers happy.

AI also helps teachers. Some online learning programs use AI to give students practice problems. If a student is having trouble, the AI gives easier questions. If the student does well, the AI makes the questions harder. This saves teachers time and gives each student the right kind of practice.

AI cannot do every job, but it is becoming a powerful helper. It makes work faster, easier, and sometimes even more fun.

Multiple Choice Questions

1. What does AI stand for?
a) Amazing Information
b) Artificial Intelligence
c) Automatic Internet
d) Advanced Instructions

2. How does AI help doctors?
a) It replaces them completely
b) It teaches them new skills
c) It looks at X-rays to find problems faster
d) It sells medicine to patients

3. Why might a store use AI?
a) To play music for customers
b) To decide what products to stock more of
c) To build new shelves
d) To take money at the checkout

4. How does AI help students in online learning programs?
a) It chooses games for them
b) It gives practice problems that change based on how well they do
c) It makes students work faster
d) It grades homework instantly

5. What is the main idea of the passage?
a) AI is taking over all jobs
b) AI is only used in stores
c) AI helps people do their jobs better and faster
d) AI can replace teachers and doctors
