## Expense Percent Watch Answer Key

1. 10% increase.
2. 15% decrease.
3. 10% increase.
4. 15% decrease.
5. 25% increase.
6. 20% decrease.

### Teacher's Guide

- Quick implementation: Review the percent change process: find the dollar change, divide it by the original expense, then multiply by 100.
- Differentiation: Let students who need support find the dollar change first and label the original amount before dividing.
- Engagement: Have students act as financial assistants checking which business costs changed the most.
- Extension: Ask students to rank the six expenses from smallest to largest percent change and identify the greatest increase and decrease.
