4. 24 goals
5. 30 sports cards
6. \$15
7. 12 books
8. 49 apples
9. 25 students
10. 21 beads

Teacher's Guide

- Review the strategy of dividing by the denominator first, then multiplying by the numerator.
- Encourage students to underline the fraction and the whole number before solving.
- Allow students to draw quick models if they need visual support.
- Have students explain which operation they used and why after solving each problem.
- Increase engagement by asking students to identify which problems involve money, sports, recipes, or collections.
- Extend learning by having students write one original fraction-of-a-number word problem and exchange it with a partner to solve.
