

Name _____

Dollar Fronts Answer Key

1. $\$20 + \$40 = \$60$
2. $\$60 - \$20 = \$40$
3. $\$80 + \$50 = \$130$
4. $\$90 - \$30 = \$60$
5. $\$300 + \$400 = \$700$
6. $\$700 - \$200 = \$500$
7. $\$1,000 + \$2,000 = \$3,000$
8. $\$4,000 - \$2,000 = \$2,000$

Teacher's Guide

- Quick implementation: Emphasize that students use the leading whole-number digit and its place value. The cents are not used in these front-end estimates.
- Differentiation: Have students underline the leading digit in each price before writing its front-end value.
- Engagement: Ask students to imagine they are quickly estimating costs without a calculator and challenge them to complete the estimates mentally.
- Extension: Have students calculate the exact amounts and compare each exact answer with its front-end estimate.
