

Name _____

Alphabetic Order Quest Answer Key

Correct Order:

1. Astronomy
2. Comet
3. Galaxy
4. Nebulae
5. Satellite
6. Telescope

Teacher Notes:

- This exercise strengthens students' ability to **sequence words alphabetically**, an essential dictionary skill.
- Remind students to compare words **letter by letter**, not just by the first letter (e.g., "satellite" vs. "telescope"—even though both start with "s" and "t," the second letters determine the order).
- Extension: Ask students to add **two new astronomy-related words** of their own, then re-sort the list in order. This encourages active application and vocabulary growth.
