

Name _____

Alphabetic Order Quest

Directions: Read the passage below carefully. Notice the underlined words. Place the words in proper **alphabetical (dictionary) order**. Check your answers carefully and remember to look beyond the first letter when needed.

In the town library, Mateo found a book about the astronomy club that met each Friday night. The club often used a powerful telescope to study the stars and planets. Mateo's favorite discovery was learning about a comet that had passed Earth centuries ago. He also read about a galaxy filled with billions of stars, far beyond what the eye could see.

Afterward, the librarian suggested checking out a book on nebulae, which are giant clouds of gas and dust in space. Mateo borrowed the book, imagining how one day he might explore a satellite orbiting Earth. The trip to the library reminded him how much fun it was to learn about science through reading.

Place the words underlined above in **alphabetical order** as they would appear in a dictionary:

1.	
2.	
3.	
4.	
5.	
6.
