

Name _____

Gemini vs. Google: What's the Difference? Answer Key

1. What does Google Search do when you type in a question?

Answer: D. It gives you a list of websites to explore.

Explanation: The passage says Google Search "shows you a list of websites that might have the answer," like walking through a library of information.

2. How is Google Gemini different from Google Search?

Answer: A. It gives direct explanations instead of just links.

Explanation: Gemini uses artificial intelligence to explain and summarize information directly, rather than listing web pages.

3. What do both Google Search and Google Gemini have in common?

Answer: B. They both help people find and understand information.

Explanation: The passage explains that both are powerful tools that help people learn, though they work differently.

4. When should you use Google Search instead of Gemini?

Answer: C. When you need to read real sources or check facts.

Explanation: Search helps users find original sources, while Gemini summarizes and explains ideas.

5. Why does the passage say the "smartest digital learners use both tools"?

Answer: A. Because each one has different strengths.

Explanation: The passage explains that Search is best for finding facts and sources, while Gemini is better for understanding or creating ideas.
