## Science Fair Sequence

**Directions:** Read the story carefully. Below the story are five events from it, but they are out of order. Number the events (1-5) to show the correct order they happened in the story.

### The Science Fair Surprise

Maya was excited about her science fair project. She had built a small volcano model to show how chemical reactions work. On the morning of the fair, she hurried to set it up, but when she poured the vinegar into the baking soda, nothing happened. Maya felt embarrassed as other students watched. After checking her supplies, she realized she had accidentally used salt instead of baking soda. Quickly, she borrowed the correct ingredient from a friend. This time, the volcano erupted with red foam bubbling out, and the judges were impressed with her explanation.

- \_\_\_\_\_ Maya borrowed baking soda from a friend.
- \_\_\_\_\_ Maya's volcano erupted with red foam and impressed the judges.
- \_\_\_\_\_ Maya discovered she had used salt instead of baking soda.
- \_\_\_\_\_ Maya set up her volcano at the fair, but it didn't work.
- \_\_\_\_\_ Maya was excited about her science fair project.
