The Rise of Social Media Activism

In the last decade, social media has transformed from a place of casual updates into a powerful platform for activism. Hashtags such as *#MeToo* and *#BlackLivesMatter* spread rapidly, uniting millions of people across the globe under shared causes. Activists now use posts, videos, and live streams to raise awareness about injustices and to call for action in real time.

Unlike traditional forms of activism that often required physical gatherings, social media allows anyone with an internet connection to participate and amplify a message instantly. Critics note that online activism can sometimes fade quickly or lack follow-through, but its ability to reach wide audiences cannot be denied. For many young people, these platforms have become the first and most accessible way to engage with social issues.
