Name _____

Copay Checkout Answer Key

1. $75
2. $90
3. $75
4. $120
5. $95
6. $95
7. $135
8. $225

Teacher's Guide

- Review that a copay is a fixed amount paid for a covered healthcare service.
- Have students multiply each number of services by its copay, then add the amounts when a scenario includes multiple services.
- For extra support, let students label the cost of each type of service before finding the total.
- For differentiation, begin with Problems 1-4, then move to the multi-service problems.
- Increase engagement by asking students to compare scenarios and identify which has the highest and lowest total copay.
- As an extension, have students create one new healthcare-use scenario using the Copay Guide and calculate its total cost.
