Name _____

Cost Share Check Answer Key

1. $50.00
2. $48.00
3. $225.00
4. $240.00
5. $165.00
6. $600.00
7. $750.00
8. $1,440.00

Teacher's Guide

- Review that coinsurance is the percentage of an allowed medical cost that the patient pays.
- Remind students to convert the coinsurance percentage to a decimal before multiplying.
- For extra support, model one example using 20% = 0.20.
- For differentiation, have students first solve the 10% and 20% problems before attempting the other rates.
- Increase engagement by asking students to rank the patient costs from least to greatest.
- As an extension, have students subtract the patient's share from each allowed cost to find the insurance plan's share.
