Name _____

Deductible Countdown Answer Key

1. $1,725
2. $1,300
3. $950
4. $450
5. $150
6. $0

Note: For Expense 6, only $150 is needed to finish meeting the deductible.

Teacher's Guide

- Explain that a deductible is the amount a patient pays for deductible-applicable covered services before the plan begins sharing certain costs.
- Have students work through the expenses in order because each answer becomes the starting balance for the next expense.
- For extra support, provide a subtraction setup for the first expense: $2,000 - $275 = $1,725.
- For differentiation, have students keep a running total of deductible-applicable expenses alongside the remaining deductible.
- Increase engagement by asking students to predict during which month Jordan will meet the deductible before calculating.
- As an extension, ask students how much of the October expense is needed to finish the deductible and how much remains after the deductible is met.
