Name _____

Plan Cost Match Answer Key

1. E, $240
2. B, $25
3. C, $50
4. D, $75
5. A, $20
6. H, $1,500
7. F, $300
8. G, $400

Teacher's Guide

- Review the difference between premiums, copays, deductibles, and coinsurance before students begin.
- Encourage students to identify the type of health insurance cost in each situation before looking for its amount.
- For extra support, have students underline clue words such as "monthly," "copay," "deductible," and "coinsurance."
- For differentiation, let students complete Items 1-6 first, then calculate the percentage-based costs in Items 7-8.
- Increase engagement by having pairs explain why each unused type of calculation would not apply to a selected situation.
- As an extension, change one cost in the fictional plan and have students determine which answers would also need to change.
