Name _____

Yearly Care Costs Answer Key

1. $2,615
2. $3,275
3. $3,530
4. $3,580
5. $4,550

Teacher's Guide

- Review that annual healthcare spending in these problems equals the annual premium plus all stated out-of-pocket costs.
- Have students calculate each type of expense separately before adding the amounts.
- For extra support, let students label premium, copay, deductible, and coinsurance costs within each scenario.
- For differentiation, begin with Problems 1-2 before moving to scenarios involving deductibles and coinsurance.
- Increase engagement by having students rank the five employees from lowest to highest annual healthcare spending.
- As an extension, ask students to calculate what percentage of one employee's total annual spending comes from the annual premium.
