## Turning Points in AI History Teacher Guide

This is a subjective ranking exercise - there's no single "correct" order. The goal is for students to justify their choices with reasoning.

### Example of thoughtful justifications:

Ranking #1 Turing's paper high because it provided the theoretical foundation (the Turing Test).

Ranking #2 Dartmouth Conference high because it formally created AI as a research field.

Ranking #5 AI Winter low because it represents a setback rather than forward progress.

Ranking #11 GPT-3 and #12 ChatGPT adoption high because they represent a major shift in public and societal impact.
