## Prompt And Circumstance

Learn how to tell when AI-generated writing paraphrases someone else's work. Read the original article excerpt and the AI's response below. Identify which parts of the AI's response paraphrase ideas from the article. Then write correct in-text citations for those sections and explain why both the *original author* and the *AI tool* deserve acknowledgment.

**Original Article Excerpt** - From "*The Climate Cost of Fast Fashion*" by Dr. Lena Morris, published in **Environmental Review Journal**, 2023: "Fast fashion has transformed clothing into a disposable commodity, creating an endless cycle of consumption. Each year, millions of garments are produced, worn a handful of times, and discarded. Textile production accounts for roughly 10% of global carbon emissions, and dyeing processes pollute freshwater supplies in developing nations. The industry's low prices mask a high environmental cost."

**AI Response** - "Clothing companies that rely on fast fashion encourage constant buying and discarding, turning apparel into a short-lived product. The fashion sector produces vast amounts of waste and contributes about ten percent of the world's carbon emissions. Cheap prices make shoppers overlook the serious environmental impact of clothing production."

### Task 1 - Identify Paraphrased Sections

Underline or highlight (or describe below) which parts of the AI response clearly **paraphrase ideas** from Dr. Morris's article. Be specific about which phrases or sentences are derived from the original source.

**Response:**

---

---

---

---

### Task 2 - Write Proper In-Text Citations

Write the correct in-text citation for the paraphrased material in both **APA** and **MLA** style. Remember: even paraphrased ideas must credit the original author.

**APA In-Text Citation:** \_\_\_\_\_

**MLA In-Text Citation:** \_\_\_\_\_
