

Name _____

Form Mastery Answer Key

1. $\frac{9}{4}$
2. $2\frac{3}{4}$
3. $\frac{18}{5}$
4. $2\frac{1}{6}$
5. $\frac{9}{2}$
6. $4\frac{1}{2}$
7. $\frac{17}{3}$
8. $3\frac{2}{5}$

Teacher's Guide

- Review whether each problem asks for an improper fraction or a mixed number before students solve it.
- Encourage students to show their multiplication or division to support their answers.
- Provide fraction strips or visual models for students who need additional support with conversions.
- Have students explain how they knew which conversion method to use for each problem.
- Challenge early finishers to write two real-world problems that require converting between mixed numbers and improper fractions.
- Extend the activity by asking students to draw a simple picture that matches one of the measurements in the worksheet.
