2. Saturday
3. Wednesday and Thursday
4. Thursday and Friday
5. 10°F
6. 5°F
7. 5 days
8. A. The temperature generally increased.

Teacher's Guide

- Quick implementation: Have students trace the line from left to right and identify where it rises, falls, or stays level before answering.
- Differentiation: For support, let students label each plotted point with its value. For added challenge, cover the listed data points and have students read all values directly from the graph.
- Engagement: Ask students to act as weather reporters and describe the biggest temperature change during the week.
- Extension: Have students predict a possible temperature for Sunday and explain whether their prediction continues or changes the overall trend.
