Name _____

Survey Sleuth Answer Key

1. Playing outside
2. Building things
3. 10 students
4. 4 students
5. Reading and riding a bike
6. 35 students
7. 3 activities
8. False. Playing games had 8 students, while reading and building things had 9 combined.

Teacher's Guide

- Quick implementation: Have students read every category and frequency before beginning the clues. Encourage them to return to the data for each answer.
- Differentiation: For support, let students underline the numbers needed for each clue. For added challenge, ask students to solve without marking the data.
- Engagement: Present students as survey sleuths who must use every clue to discover what the class results reveal.
- Extension: Have students write two new clues using the same survey results and exchange them with a partner to solve.
