

## The Power of Feedback (Even from an AI) Answer Key

1. **Feedback** means information that helps something or someone improve.

**Explanation:** The passage says feedback is information that shows what is good and what can be better.

2. If ChatGPT gives an answer that is missing details or confusing, you should give feedback by asking it to explain more clearly or add more information.

**Explanation:** The text gives examples like "Please explain that more" or "Can you use simpler words?"

3. Feedback from a teacher or coach is similar to feedback for an AI because both help someone improve by showing what works and what doesn't.

**Explanation:** The passage compares the AI example to teachers' notes and a coach's advice.

4. Two ways feedback helps people or AIs improve are by helping them see what's good and by showing what needs to change.

**Explanation:** Feedback guides improvement by recognizing strengths and weaknesses.

5. Feedback is important in the iterative refinement loop because it helps you know how to adjust or improve your next try.

**Explanation:** Without feedback, there would be no direction for refinement.

6. Being a "partner in improvement" means you work together with the AI to make the answers better.

**Explanation:** The user and AI both play a role in refining the results.

7. The three words that describe how learning happens are **listening, adjusting, and trying again.**

**Explanation:** This phrase appears near the end of the passage to describe the learning process.

8. *Student answers will vary.*

**Example:** "When my teacher told me to make my sentences longer, I learned to add more details to my writing."

**Explanation:** Any example showing how feedback led to improvement is acceptable.
