Name _____

Statistic Secrets Answer Key

1. 10
2. 18
3. 20
4. 13
5. 34
6. 19
7. 20
8. 13

Teacher's Guide

- Quick implementation: Review how median, mode, and range are determined. Encourage students to identify which statistic is given before solving for the missing value.
- Differentiation: Let students rewrite median problems in order, circle repeated values in mode problems, and label the minimum and maximum in range problems.
- Engagement: Have students solve each puzzle and then substitute their missing number back into the data set to verify that the given statistic is correct.
- Extension: Ask students to create their own missing-number puzzle using a median, mode, or range and exchange it with a partner.
