Name _____

Statistics Checkpoint Answer Key

1. B. Median.
2. 6, 8, 11, 14, 17.
3. 9
4. 13.
5. Mode.
6. 9
7. 5 and 7.
8. C. No mode.
9. 16
10. Maximum - minimum.
11. A. Median = 16.
12. B. Range 20.

Teacher's Guide

- Quick implementation: Use this worksheet after median, mode, and range have been taught separately. Remind students that data must be ordered before finding the median.
- Differentiation: Allow students to rewrite data sets in order and circle repeated values. Provide the range rule, maximum - minimum, for students who need support.
- Engagement: Have students complete the quiz independently, then compare selected answers with a partner and explain which rule they used.
- Extension: Ask students to create one data set with two modes and another with no mode. Then have them calculate the median and range of each set.
