

AI Myths - Rank the Myths Answer Key

Note: Rankings will vary. What matters is students provide logical reasoning.

- **AI is always neutral and fair.** → Often ranked as **most harmful** because it can hide real bias and discrimination in AI systems.
- **AI is guaranteed to replace every single human job.** → Harmful because it spreads fear, discourages people from preparing for the future, and ignores opportunities.
- **AI will soon take over the world and control humans.** → Harmful because it creates panic and distracts from real issues.
- **AI can never make mistakes.** → Harmful because blind trust in AI can cause serious errors in medicine, law, or finance.
- **Only experts need to understand AI.** → Harmful because it excludes people from making informed decisions about technology policies.
- **AI is smarter than humans at everything.** → Misleading, but less directly harmful because people usually recognize limits when they interact with AI.
- **AI has emotions and can feel happiness, sadness, or anger.** → Less harmful, but it can confuse people into treating AI like humans.
- **AI is alive, just like animals and humans.** → Usually ranked **least harmful** because while incorrect, it's not as damaging in real-world decision-making.
