Name _____

Bill Pay Planner Answer Key

1. $875.00
2. $780.25
3. $720.26
4. $591.76
5. $519.36
6. $472.51

Teacher's Guide

- Quick implementation: Explain that each scheduled bill payment is subtracted from the current account balance on its payment date.
- Differentiation: Let students cross out each previous balance and write the updated balance beside the next scheduled payment.
- Engagement: Have students act as account managers checking whether enough money remains after every scheduled bill.
- Extension: Ask students to calculate the total amount paid for all six bills and verify the final balance using one subtraction.
