6. $0.4 / 5 + 0.4 + 0.006$
7. Hundredths / 0.8
8. Hundredths / $3 + 0.1 + 0.05$

Teacher's Guide

- Review tenths, hundredths, and thousandths before students begin.
- Encourage students to underline the digit named in each question before identifying its place or value.
- Provide a place value chart for students who benefit from visual support.
- Ask pairs to explain how they determined each digit's value using its position.
- Invite students to find a decimal at home or in the classroom, such as on a food label or measuring tool, and identify the place value of each digit.
- Extend the activity by having students write each decimal in word form after completing the worksheet.
