

Name _____

Place Finder Answer Key

1. tenths
2. hundredths
3. thousandths
4. ones
5. tenths
6. hundredths
7. thousandths
8. ones
9. tenths
10. hundredths
11. thousandths
12. tenths

Teacher's Guide

- Review the place value pattern before starting: ones, tenths, hundredths, thousandths.
- Encourage students to point to the decimal point first, then count places to identify the correct name.
- Allow students who need support to use a place value chart while completing the worksheet.
- Have partners compare answers and explain how they identified each place name.
- Challenge early finishers to create four decimals and underline different digits for a classmate to identify.
- Extend the lesson by asking students to write the value of each underlined digit after naming its place.
