

Name _____

Matching Pollution Types Answer Key

1. Air Pollution → c, e
2. Water Pollution → d, f
3. Soil Pollution → a, g
4. Noise Pollution → b, h

Sample Challenge Answer

Water pollution affects people when dirty rivers make drinking water unsafe, leading to disease. It harms the environment by killing fish and other aquatic life. Polluted water also spreads chemicals through the food chain, affecting animals and plants. Protecting water is essential for healthy communities and ecosystems.
