4. Correct.
5. Incorrect. Markdown = $36; sale price = $84.
6. Correct.
7. Correct.
8. Correct.

Teacher's Guide

- Quick implementation: Review the formulas for dollar markup, markup rate, selling price, dollar markdown, and sale price before students begin.
- Differentiation: Have students underline the original price or cost and circle the percentage before checking each calculation.
- Engagement: Present students as pricing auditors reviewing employee files before the store's prices are approved.
- Extension: Have students rewrite two correct files with intentional pricing errors, then exchange them with a partner to solve.
