Name _____

# Markup Sprint Answer Key

1. $4.50
2. $9.60
3. $9.60
4. $9.00
5. $21.00
6. $20.00
7. $14.00
8. $5.40
9. $30.00
10. $45.00

## Teacher's Guide

- Quick implementation: Review how to convert a percent to a decimal before students begin. Model one example using the formula.
- Differentiation: Allow students who need support to write each markup rate as a decimal before multiplying. Challenge advanced students to work without a calculator.
- Engagement: Frame the activity as preparing price tags for a new store. Students earn one point for each correct dollar markup.
- Extension: Have students add each dollar markup to the original cost to determine the product's selling price.
