Name _____

Rate Detective Answer Key

1. 25%
2. 40%
3. 35%
4. 30%
5. 45%
6. 25%
7. 40%
8. 30%

Teacher's Guide

- Quick implementation: Review how to divide the dollar markup by the original cost and convert the result to a percentage.
- Differentiation: Provide a percent conversion reminder for students who need support. Allow calculators when appropriate.
- Engagement: Have students act as pricing analysts who must identify the markup rate assigned to each store product.
- Extension: Ask students to use each cost and markup to calculate the corresponding selling price.
