Name _____

Carnival Forecast Answer Key

1. 20
2. 15
3. 10
4. 6
5. 50
6. 30
7. 20
8. 25

Teacher's Guide

- Quick implementation: Review that predicted frequency = probability x number of trials. Model one example before students begin.
- Differentiation: Let students divide the number of spins by the probability's denominator when the numerator is 1.
- Engagement: Have students predict which prize would appear most and least often before completing the calculations.
- Extension: Ask students to predict the number of times all four outcomes would occur in 240 spins and check that their predictions total 240.
