Predicting AI Oopsies Before They Happen

Sometimes AI gives answers that are off-target, shallow, or just plain weird-and often it's because the prompt wasn't strong enough. A weak prompt is like a shaky recipe: the cake might collapse in the oven. Your mission: **look at each weak prompt, predict the kind of flawed answer the AI might give, and then rewrite the prompt to prevent that error.** Think of yourself as doing a "disaster drill" for prompts: spot the problem *before* it happens.

Weak Prompt 1 - "Tell me about animals."

What flawed answer might AI give?

Rewrite the prompt to fix it:

Weak Prompt 2 - "Write a report."

What flawed answer might AI give?

Rewrite the prompt to fix it:

Weak Prompt 3 - "Explain history."

What flawed answer might AI give?

Rewrite the prompt to fix it:
