## Deep Sea QAR

**Directions:** Read the passage carefully. Using what you've read, create **one question for each QAR type**:

- **Right There** - A question with the answer stated directly in one sentence.
- **Think and Search** - A question that requires combining information from different parts of the passage.
- **Author and Me** - A question that mixes the author's ideas with your own background knowledge.
- **On My Own** - A question that does not depend on the passage and comes from your own life or opinions.

### The Mystery of the Deep Sea

The deep sea is one of the least explored places on Earth. Sunlight cannot reach these dark waters, so many creatures create their own light through a process called bioluminescence. Scientists have discovered fish with glowing lures, jellyfish that flash like fireworks, and squid that release glowing clouds to escape predators. Because of the pressure at such depths, submarines and special equipment are needed to explore. In recent years, researchers have found new species during nearly every deep-sea mission. The deep sea may also hold clues about Earth's history and resources that could be useful in the future. Even with modern technology, most of the deep ocean remains a mystery, waiting to be explored.
